

Introduction

You are tasked with creating a modern, responsive website for a boutique coffee shop that is expanding its presence online. The shop, *Bean Boutique*, has been successfully operating in a local neighbourhood and now aims to reach a wider audience by showcasing its unique coffee blends, brewing equipment, and coffee-related events online. The website should be visually appealing and user-friendly across various devices, setting the stage for future e-commerce capabilities.

Scenario

Bean Boutique has outlined several key requirements for their website to ensure it effectively represents their brand and offerings:

- **Home Page:**
 - The main page should welcome visitors with enticing images of coffee beans, brewing equipment and people enjoying coffee. The aim is to evoke a sense of warmth and community.
 - Use visuals prominently to minimise text clutter, enhancing the user experience with high-quality images and infographics.
 - Include a navigation bar that features smooth hover effects, a slideshow of featured products and events, a well-structured header, informative sections, and a footer.
 - Implement a modal popup window for first-time visitors, offering a discount on their first purchase in exchange for email signup.
- **Coffee Selection:**
 - This page will display a catalogue of the coffee shop's unique blends and single-origin coffees. Each listing should include a brief description, tasting notes, and recommended brewing methods.
- **Brewing Equipment:**
 - Display a range of brewing equipment sold by the boutique, from espresso machines to French presses, including detailed descriptions and usage tips.
- **Events and Workshops:**
 - A section dedicated to upcoming events and workshops, such as coffee tasting sessions, brewing classes, and meet-the-roaster events. Include a registration feature for users to sign up online.
- **Shopping Cart:**
 - Allow visitors to add their favourite coffee blends and equipment to a shopping cart for future purchases. This feature should save user selections and offer an easy checkout process once online transactions are enabled.
- **Special Offers and Subscriptions:**
 - Highlight special promotions and introduce a subscription model for regular coffee deliveries. Detail the subscription levels and benefits.

- **Additional Requirements:**

- Integrate at least THREE (3) different plugins or widgets, such as social media feeds to highlight the shop's community engagement, an interactive map to locate the shop and events, and a security feature to protect customer data.

At the initial stage of the development process, you are required to make a HTML/CSS prototype of the website that will clearly show how the final website could work.

Content has not been provided. Familiarise yourself with possible types of content by choosing an appropriate organisation (by using web resources) to help you understand the context in which the shop operates.

However, do not limit yourself to web-based sources of information. You should also use academic, industry, and other sources. Suitable content for your prototype can be found on the web e.g. images. Use creative commons (<https://search.creativecommons.org/>) or Wikimedia Commons (http://commons.wikimedia.org/wiki/Main_Page) as a starting point to find content.

Remember, the content you include in your site must be licensed for re-use. Do not spend excessive amounts of time researching and gathering content. The purpose is to provide a clear indication of how the final website could look and function. The client would provide the actual content at a later point if they were happy with the website you have proposed.

Aim

The aim is to create a website for the boutique coffee shop.

Important Note

*You must **not** use templates that you have not designed or created in the website assessment. This includes website building applications, free HTML5 website templates, or any software that is available to help you with the assessment.*

*You **must create your own HTML pages** including CSS files using Notepad or a similar text editor.*

Task 1: HTML – 25 Marks

The website must be developed using HTML5 **and** feature a minimum of SIX (6) interlinked pages, which can also be viewed on a mobile device. The website must feature the content described above **and** meet the following criteria:

- Researched relevant content to inform the design of the website.
- Be usable in at least TWO (2) different web browsers including being optimised for mobile devices and responsive design. You should consult your tutor for guidance on the specific browsers and versions you should use.
- Include relevant images of coffee shop drinks you have selected from your research including the use of headers, sections, and footers.
- **Home Page:**
 - Minimal text with visuals to break up the written content.
 - Navigation bar (with links inside the bar and hover over tabs)
 - Responsive design and at least ONE (1) plugin
 - Header
 - Sections
 - Footer
- **Coffee selection** - unique blends page with responsive design and including TWO (2) different plug-ins, catalogue style and animated text search for products.
- **Brewing Equipment** - a page showing a range of brewing equipment sold by the boutique, including detailed descriptions and usage tips.
- **Shopping Cart** - Page created which allows the customers to add products to their basket.
- **Events and Workshops** - A page dedicated to upcoming events and workshops. This page should have a responsive registration feature for users to sign up online including first name, last name, email address and submit button (through email).
- **Special Offers and Subscriptions** - A page to highlight special promotions and introduce a subscription model for regular coffee deliveries. Detail the subscription levels and benefits.

Task 2: CSS – 25 Marks

Create an external CSS file that specifies the design for the website. Each of the HTML pages must link to this CSS file. There should be **no** use of the style attribute **or** the `<style>` element on the website.

The boxes on the home page should include relevant elements such as border-radius, box shadow, hover etc.

Include on-page animated text search to allow users to find content on the page.
